EDUCATION

Bhagwan Parshuram Institute of Technology

2022 – 2026

BTech

CGPA: 8.9 / 10

Arwachin Bharti Bhawan Senior Secondary School

2021 – 2022

Class XII

Percentage: 80.6%

EXPERIENCE

Veersa Technologies

October 2025 – December 2025

Software Engineer

- Engineered 2 full-stack web application features using React and Node.js, resulting in a 12% increase in user engagement over six months and contributing to improved user experience
- Implemented RESTful APIs and optimized backend performance, improving response time by 35%
- Collaborating with cross-functional teams to deliver AI-integrated product features and enhance UX
- Created a detailed test suite using Jest and increased test coverage by 35%, identifying and resolving edge cases before deployment and ensuring a robust, stable user experience

Restroworks

January 2026 – March 2026

MERN Stack Developer Intern

- Engineered offline-first synchronization mechanism for POS systems using service workers and local data queuing, ensuring uninterrupted restaurant operations during network failures with seamless data sync on reconnect
- Designed and developed scalable RESTful APIs using Express.js and Node.js for core restaurant operations — order management, billing, inventory tracking, and multi-outlet POS — with structured error handling and input validation middleware
- Architected real-time communication layers using event-driven patterns to handle concurrent order streams across multiple restaurant outlets with low-latency response under high transaction volumes
- Optimized MongoDB aggregation pipelines and query indexing strategies to reduce database load and maintain consistent performance during peak-hour restaurant traffic

PROJECTS

Task Management Application

2 Months

- Developed a full-stack task management system using React and Express.js with DM operations and intuitive UI for efficient task tracking
- Implemented offline-first architecture using IndexedDB and local storage to allow users to manage tasks without internet connectivity
- Designed a hybrid synchronization engine with pending queue and polling mechanisms to sync local changes with backend seamlessly
- Built RESTful APIs with structured error handling and JWT-based authentication for secure user-specific task management

AI-ShortsGenerator

2 Months

- Developed an AI-powered short-form video script generator for social media creators
- Integrated OpenAI API and optimized UI for 25% faster load times
- Deployment: aiproject-woad.vercel.app

SmartFinance

1 Month

- Built an AI-based expense tracker that categorizes and analyzes user spending patterns
- Helped users save \$100+/month through AI insights, improving savings by 20%
- Automated bill payments for 100+ users, reducing late fees by 15% and speeding transactions by 40%
- Deployment: smart-finance-rose.vercel.app

TECHNICAL SKILLS

Languages: C++, JavaScript, SQL, Python, Golang, Java

Frameworks: Next.js, React, Nodejs, Express, FastApi

Cloud & DevOps: AWS (EC2, Lambda, Rekognition, S3, SQS), Docker

Databases: MongoDB, MySQL
